Product Management and AI/ML Leader

Bio

Nick is a strategic and empathetic product leader who excels at translating complex AI and analytics capabilities into effective solutions that lead to growth and improved operational efficiency. With experience leading both product and data science teams, Nick is at his best working cross-functionally, collaborating with stakeholders to connect goals from strategy, operations, and analytics teams into technology and business processes. In his most recent role at Home Partners of America, Nick built out a real estate asset management platform that was used to sell over \$1B in homes while reducing time-to-list by over 20%, as well as an AI-powered maintenance vendor selection tool that saved over \$3.4 million annually in costs, among other significant projects.

Professional Experience

SENIOR DIRECTOR, PRODUCT MANAGEMENT

January 2024 – Present

Home Partners of America | Chicago, IL

- Led development and scaling of new dispositions process and pipeline, selling over 2,000 homes, a 400% increase YoY, yielding over \$1B in returns
- Oversaw development and integration of custom build-out of third-party real estate asset management platform, creating the capability and workflows for external asset managers and real estate agents to collaborate with in-house dispositions team
- Automated repair and pricing approval workflows to eliminate unnecessary approvals and handoffs, reducing average time to repair and list a property from 64 to 50 days
- Designed schemas and developed data integrity reporting for ETL process from software solution to internal data lake, leading to quick identification and correction of failed data transfer or accuracy issues
- Developed daily operational analytics dashboard to identify bottlenecks and ensure continued progress, recovering over 300 unlisted properties and isolating inconsistent protocols across asset management team
- Collaborated on and executed strategic plan to transition dispositions technology and business operations to successor organization while winding down existing operations at HPA

DIRECTOR, DATA SCIENCE

October 2018 – January 2024

Home Partners of America | Chicago, IL

- Led team of 8 managing all operations data science initiatives at Blackstone-backed SFR REIT, including resident underwriting, rent collections, communications, maintenance, and marketing
- Designed and deployed predictive analytics model for resident delinquency, enabling intervention for at-risk leases, leading to a 4.8% annual increase in rent collections rate and a marginal \$30 million in revenue
- Built and deployed end-to-end AI-powered vendor selection suite, resulting in a 5% decrease in maintenance costs (\$3.4 million annual savings) by scoring, recommending, and dispatching vendors for work orders
- Developed task management system for managing turn projects, optimizing manager time and monitoring performance, contributing to a 60% decrease in average project completion time from 98 to 39 days
- Defined and applied framework for measuring resident performance via bottom-line financial impact to establish credit and income criteria for underwriting potential residents
- Leveraged LLMs to categorize and extract action items from resident work orders and survey responses
- Developed resident underwriting and buy box criteria for socially motivated investment vehicle, Choice Lease, enabling over 900 low-to-moderate-income families to find high-quality, affordable housing
- Analyzed resident call routing patterns through data visualization and collaborated with stakeholders to implement logic updates that cut average wait times by 28 minutes for some non-maintenance ring groups
- Built and implemented resident screening criteria that balanced growth with risk management

DATA SCIENTIST

August 2017 – September 2018

Booz Allen Hamilton | Washington, DC

- Built machine learning models that analyzed and categorized government transactions into cost centers
- Designed and taught a Python data analysis course to over 300 Department of Defense employees
- Created interactive data visualizations for clients using Tableau
- Generated engaging courseware by modeling classified real-world problems with simulated datasets

Areas of Expertise

Professional Skills: Artificial Intelligence | Data Analytics | Data Science | Generative AI | Large Language Models | Machine Learning | Natural Language Processing (NLP) | Operations | Process Improvement | Workflow Optimization | Product Strategy & Management | Project Management | Real Estate Acquisitions | A/B Testing | Voice Of Customer | User Stories | OKR and KPI Development | Stakeholder Management | Recruitment | Property Management | Risk Management | Reporting | Prompt Engineering | Team Management

Technical Skills: Python | SQL | PowerBI | Git | Excel | Tableau | JIRA | Asana | R | MATLAB | OpenAI API | Anthropic API | Lucidchart | AI-Assisted Development Tools | VScode

Education

Bachelor of Science in Computer Science (magna cum laude) | University of Notre Dame | Notre Dame, IN
